A. Reversible aerial tramways, which are that class of aerial passenger tramways and lifts by which passengers are transported in carriers and are not in contact with the ground or snow surface, and in which the carriers reciprocate between terminals. This class includes:

(1) Single-reversible tramways, which are a type of reversible lift or aerial tramway having a single carrier, or single group of carriers, that moves back and forth between terminals on a single path of travel, sometimes called "to-and-fro" aerial tramways; and

(2) Double-reversible tramways, which are a type of reversible lift or aerial tramway having 2 carriers, or 2 groups of carriers, that oscillate back and forth between terminals on 2 separate paths of travel, sometimes called "jig-back" aerial tramways; [PL 1995, c. 560, Pt. H, §14 (NEW); PL 1995, c. 560, Pt. H, §17 (AFF).]

B. Aerial lifts and skimobiles, which are that class of aerial passenger tramways and lifts by which passengers are transported in carriers and are not in contact with the ground or snow surface, and in which the carriers circulate around a closed system and are activated by a wire rope or chain. The carriers usually make U-turns in the terminals and move along parallel and opposing paths of travel. The carriers may be open or enclosed cabins, chairs, cars or platforms. The carriers may be fixed or detachable. This class includes:

(1) Gondola lifts, which are a type of lift or aerial tramway by which passengers are transported in open or enclosed cabins. The passengers embark and disembark while the carriers are stationary or moving slowly under a controlled arrangement;

(2) Chair lifts, which are a type of lift or aerial tramway by which passengers are transported in chairs, either open or partially enclosed; and

C. Surface lifts, which are that class of conveyance by which passengers are propelled by means of a circulating overhead wire rope while remaining in contact with the ground or snow surface. Transportation is limited to one direction. Connection between the passengers and the wire rope is by means of a device attached to and circulating with the haul rope known as a "towing outfit." This class includes:

(1) T-bar lifts, which are a type of lift in which the device between the haul rope and passengers forms the shape of an inverted "T," propelling passengers located on both sides of the stem of the "T";

(2) J-bar lifts, which are a type of lift in which the device between the haul rope and passenger is in the general form of a "J," propelling a single passenger located on the one side of the stem of the "J"; and

(3) Platter lifts, which are a type of lift in which the device between the haul rope and passenger is a single stem with a platter or disk, attached to the lower end of the stem, propelling the passenger astride the stem of the platter or disk; [PL 1995, c. 560, Pt. H, §14 (NEW); PL 1995, c. 560, Pt. H, §17 (AFF).]

D. Tows, which are that class of conveyance in which passengers grasp a circulating haul rope, which may be natural or synthetic fiber or metallic, or a handle or gripping device attached to the circulating haul rope, and are propelled by the circulating haul rope. The passengers remain in contact with the ground or snow surface. The upward-traveling haul rope remains adjacent to the uphill track at an elevation that permits the passengers to maintain their grasp on the haul rope, handle or gripping device throughout the portion of the tow length that is designed to be traveled; and [PL 1995, c. 560, Pt. H, §14 (NEW); PL 1995, c. 560, Pt. H, §17 (AFF).]
